

**Hello!**

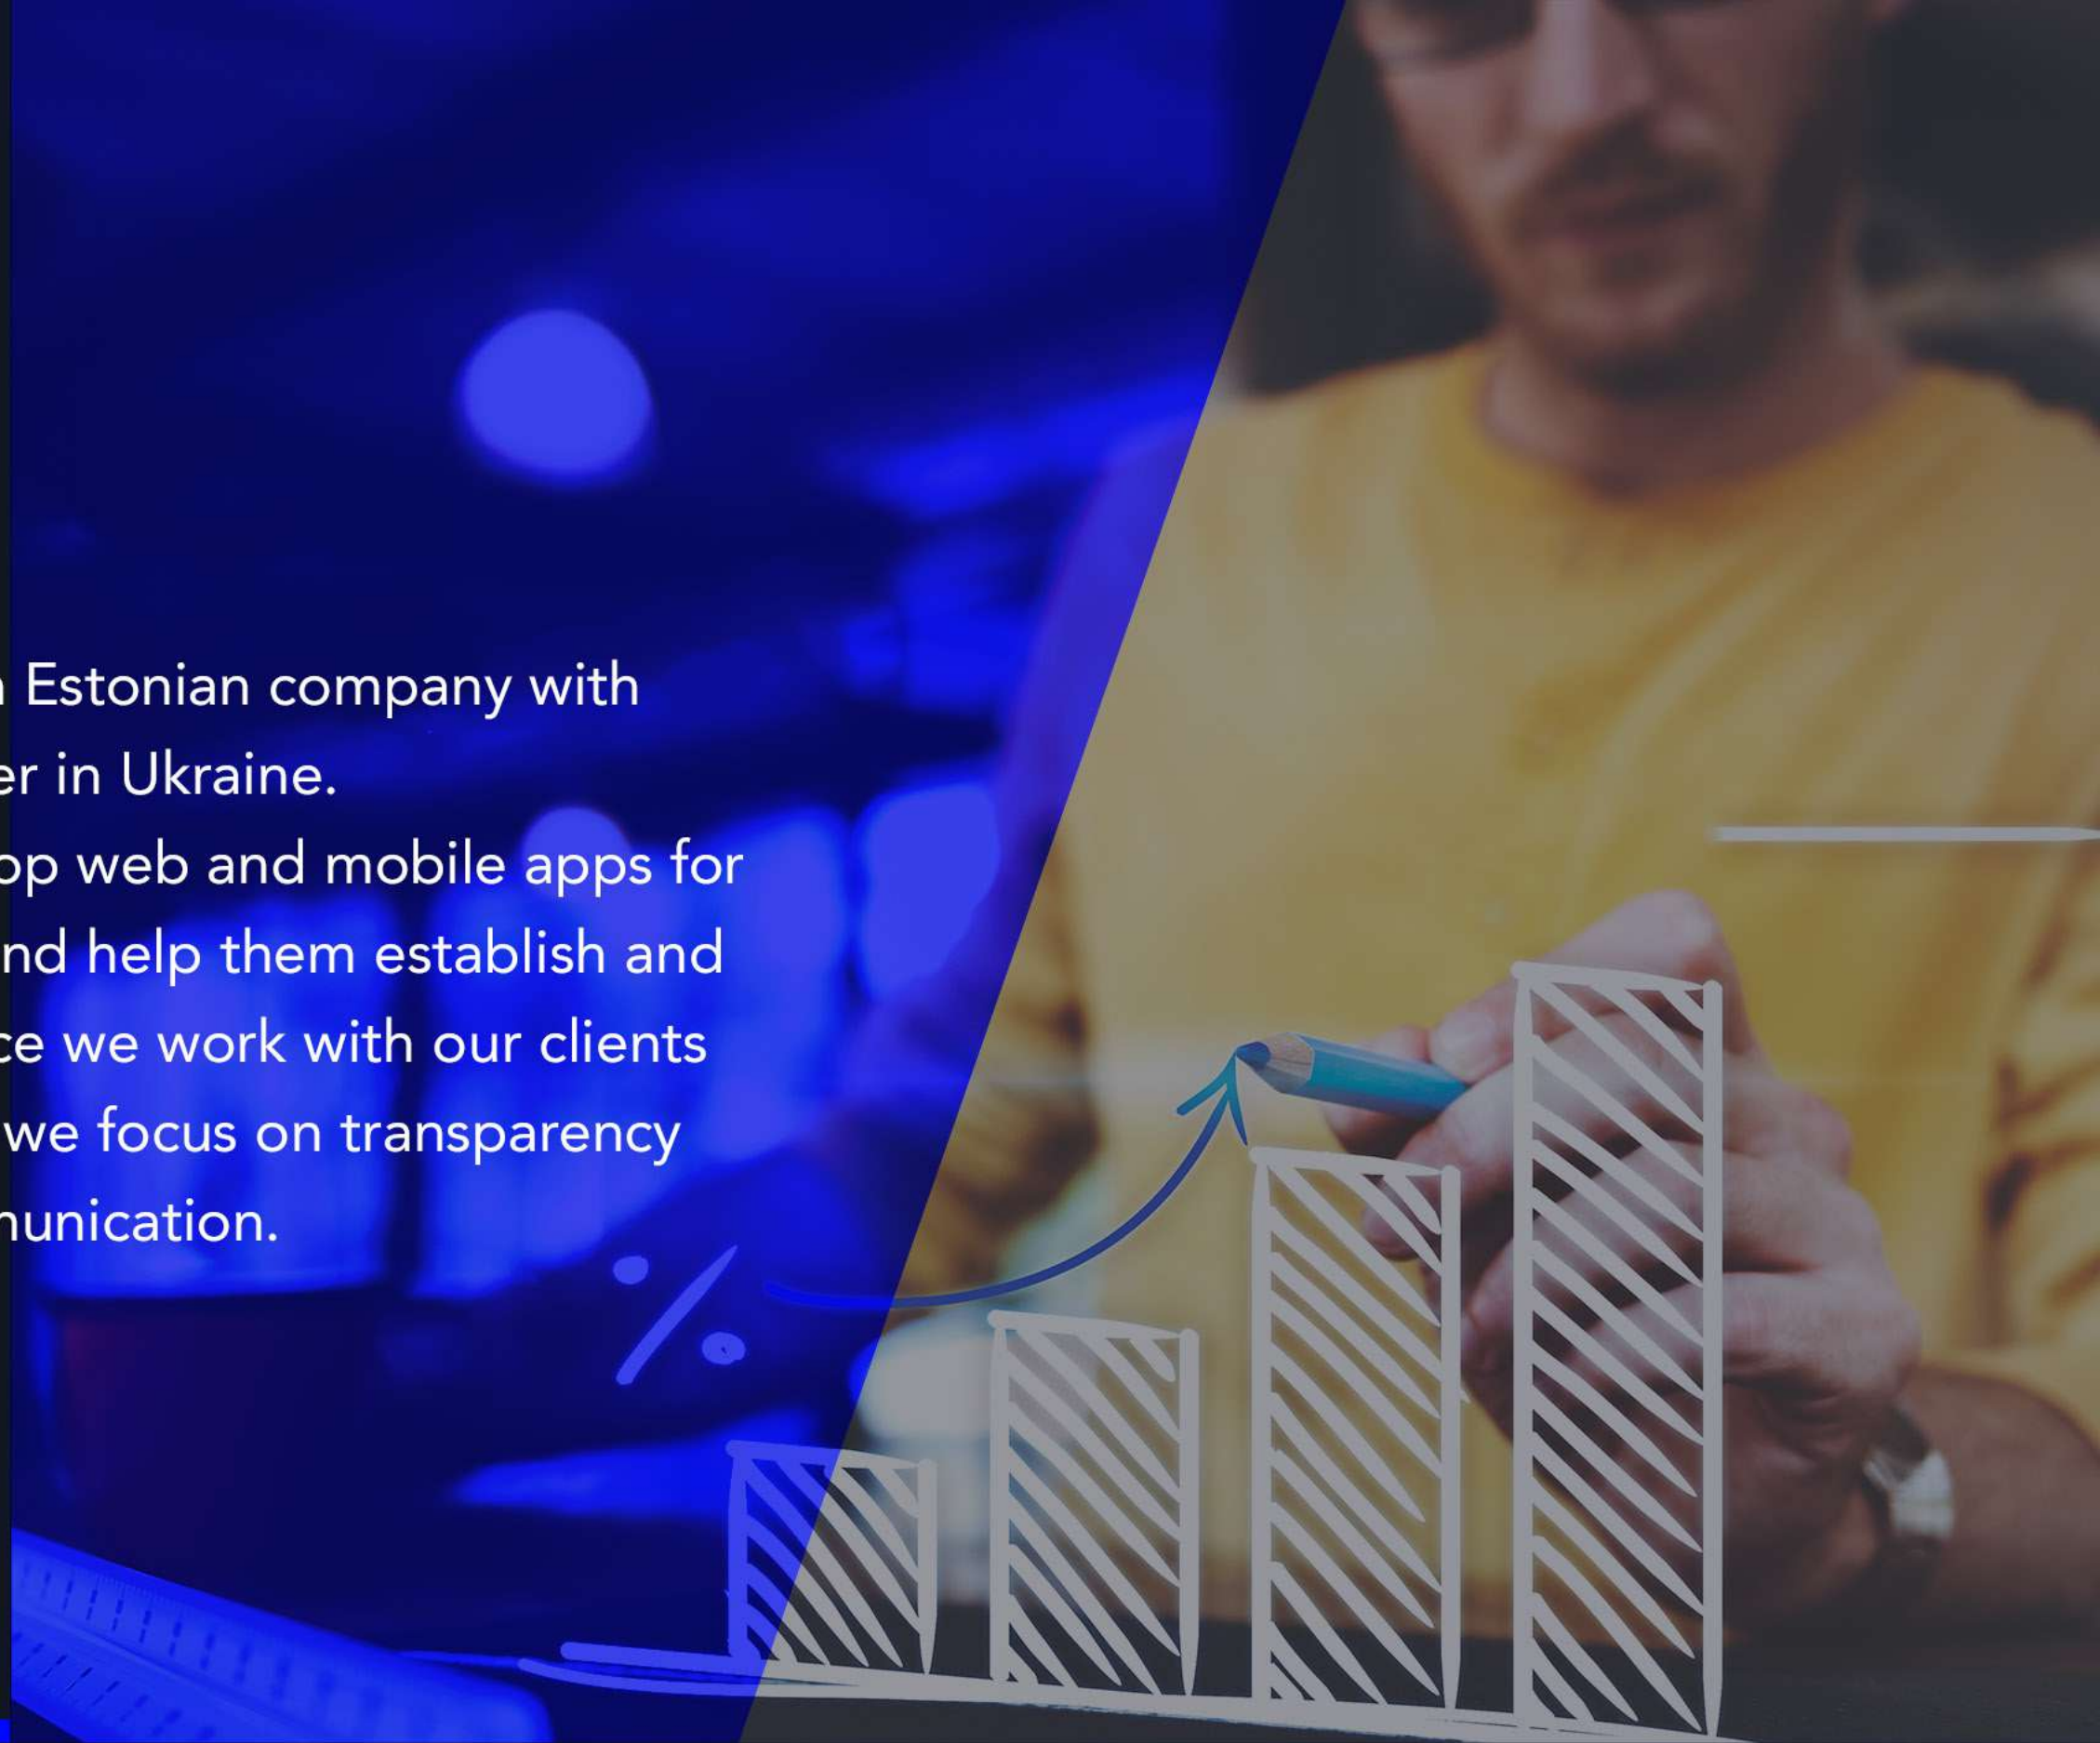

**We Are**

**Riseapps**

web and mobile development

An abstract, organic shape on the left side of the slide, filled with a gradient of colors from blue at the top to orange and red in the middle, and pink and purple at the bottom. It has a smooth, flowing appearance.

We are an Estonian company with  
RnD center in Ukraine.  
We develop web and mobile apps for  
startups and help them establish and  
scale. Since we work with our clients  
remotely, we focus on transparency  
and communication.

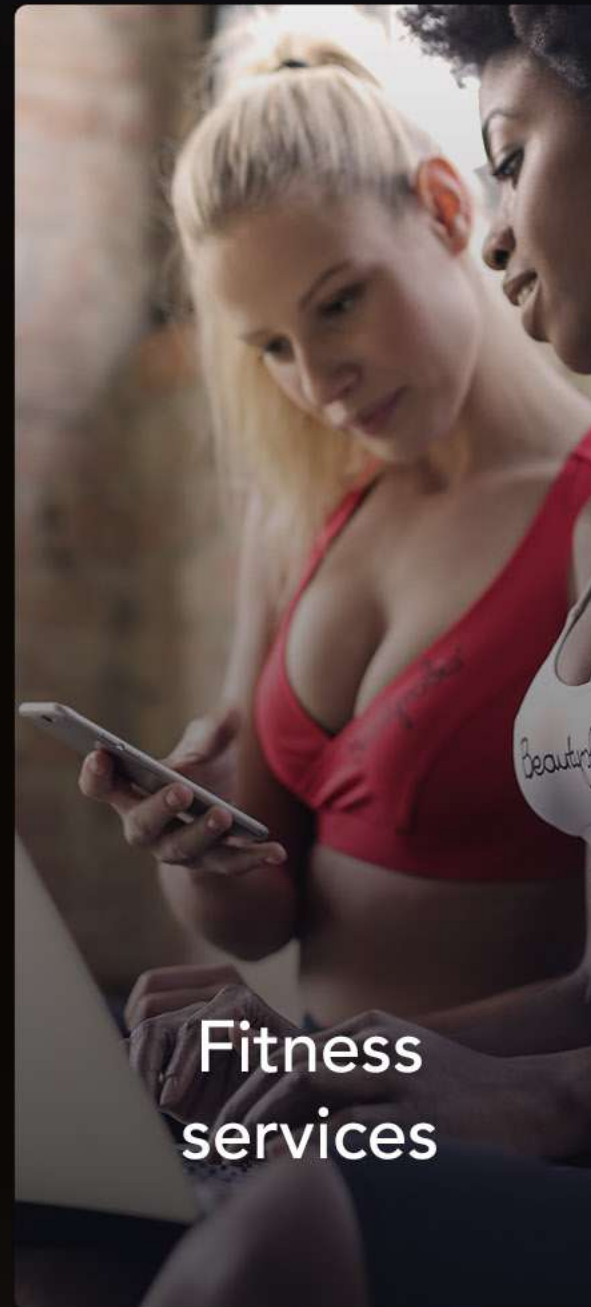

# We mostly build apps for

On-demand  
services (SaaS)

Healthcare

Fitness  
services

IoT  
systems

Social  
platforms

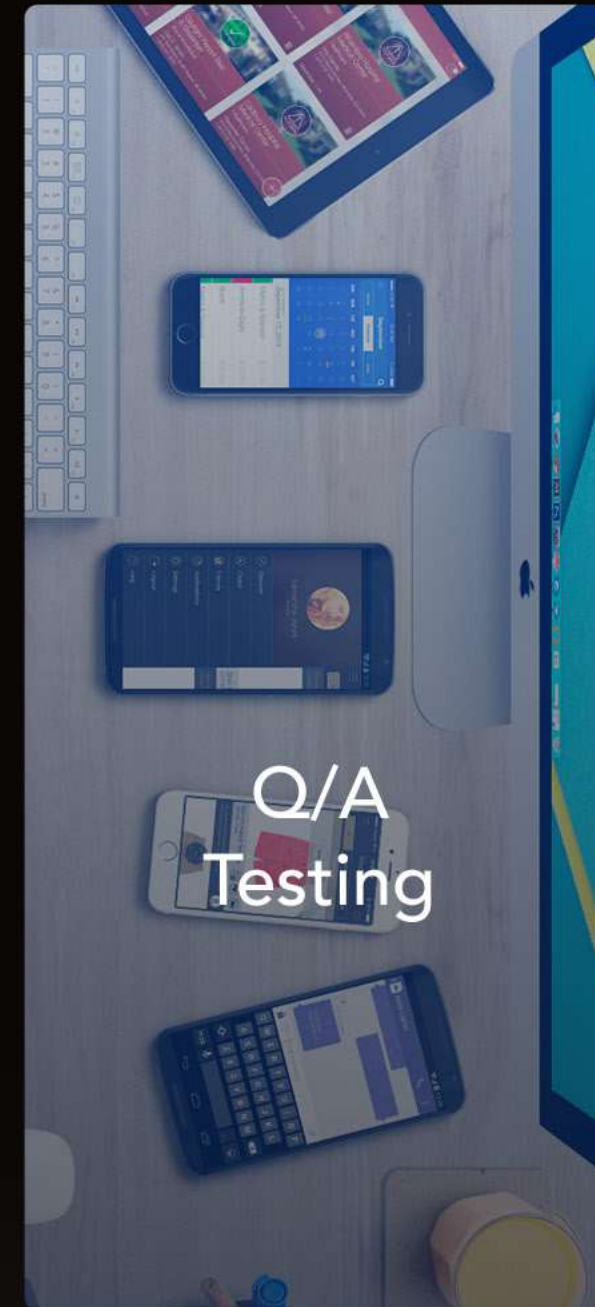

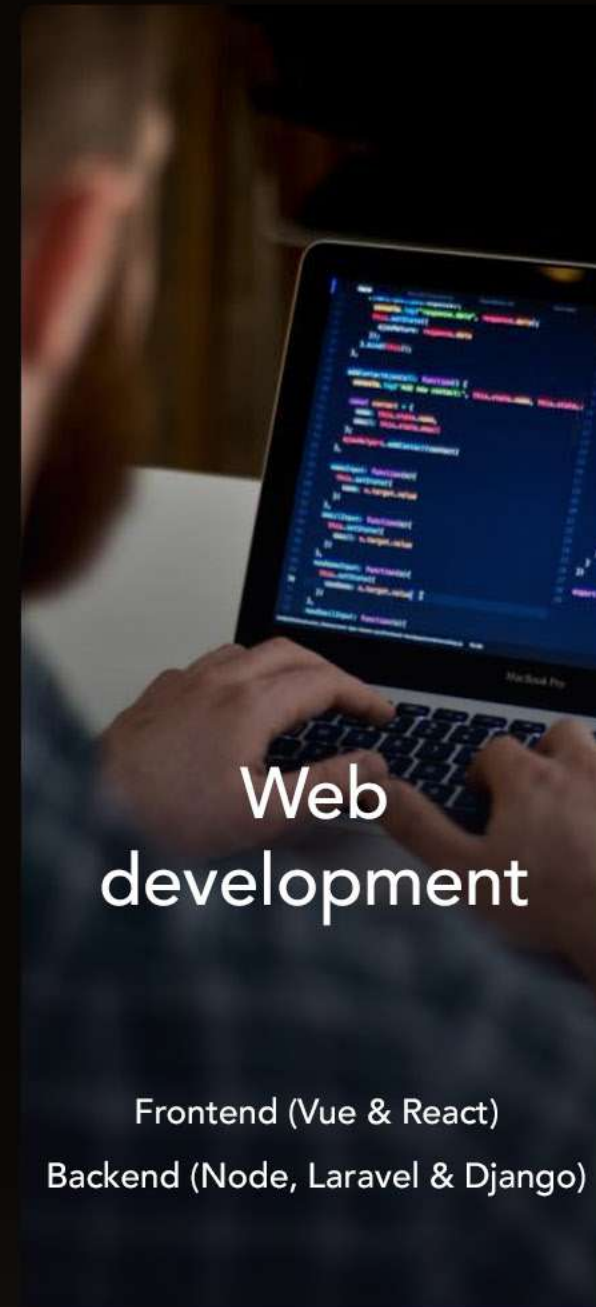

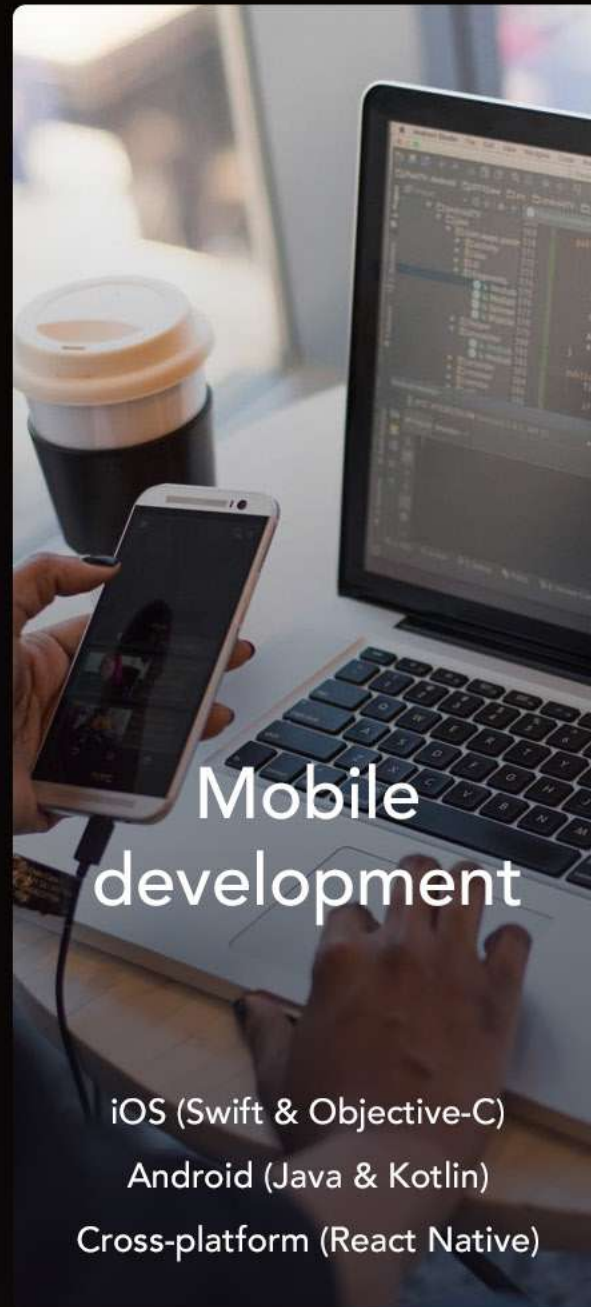

Most of our clients are from the USA and Western Europe.  
We have worked with clients from:

We want to be sure in every aspect of the development. That's why we build our apps from scratch and in-house.  
Our services include:

Open communication and transparency always helped us  
do our job fast and efficiently.

We know how risky a business can be.  
To make our clients feel safe, we provide them with all  
the necessary tools for remote progress tracking:

### Jira

our developers use Jira to log  
their work time and update  
progress on their tasks.  
You can monitor this data in  
real time.

### Confluence

we store all the technical  
specifications in one place to  
make sure that everyone is on  
the same page.

### Skype/Slack

our developers have at least  
intermediate level of English,  
and they can openly discuss  
any problem with you.

### Zoom/Hangouts

our PMs speak fluent English  
and German and are always  
available for calls.

### GitHub/BitBucket

for code management.

**We hire only middle  
and senior developers.**

**Our time zone  
GMT+2**

# Our Works

Beautiful. Innovative. Profitable.

# Ruggengraat

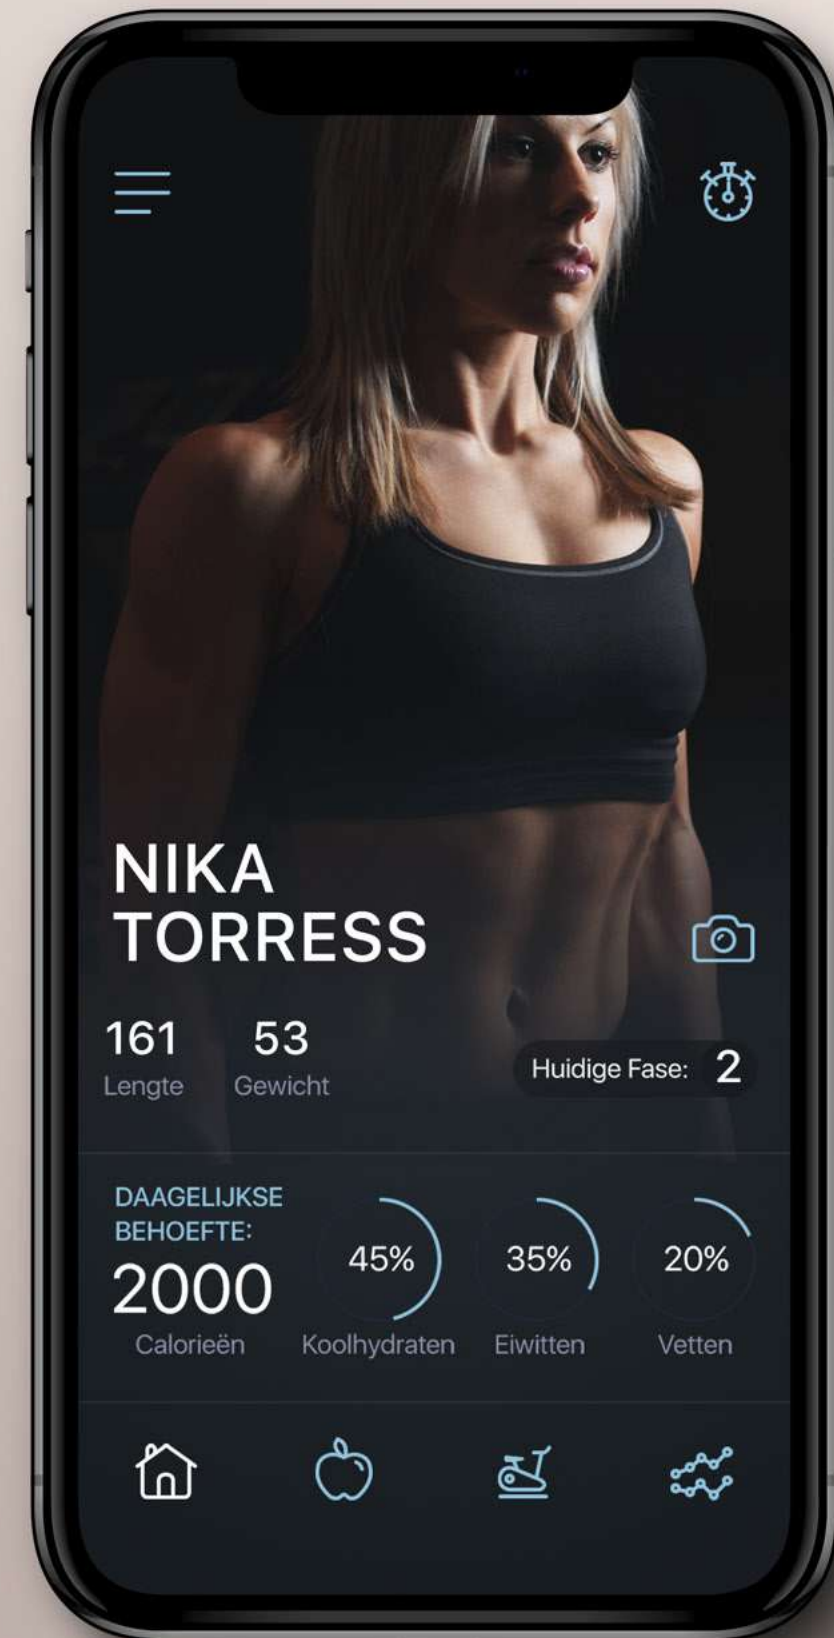

Software kit for a fitness service

Status: Released

iOS: Swift

Android: Java

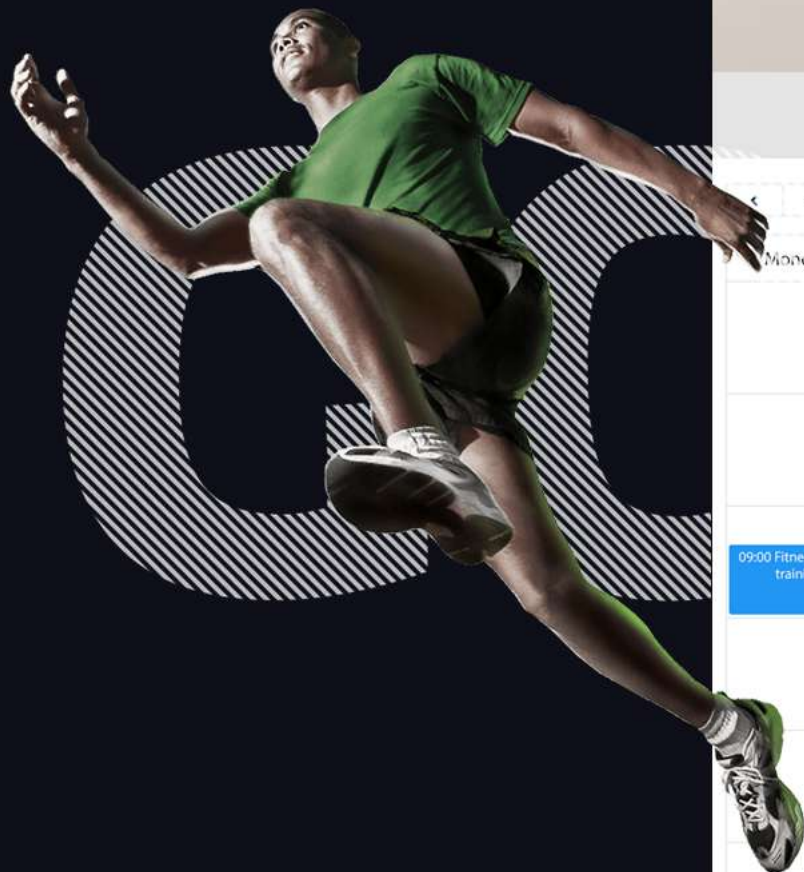

Web: Laravel, Bootstrap

“

We couldn't have scaled the company without them. When we started the company, we were two coaches—now we have 11 coaches working for us. In 2016 we had 20–30 clients each month. Now we have 100–150. It's huge growth. They made that possible.

Faruk Hadziomerovic,  
Ruggengraat co-founder

The screenshot shows the 'Adminpanel' with a sidebar on the left containing the 'RG' logo, a profile picture of Estefania Cuphal, and navigation links for 'Coaches', 'Clients', and 'My Profile'. The main area is titled 'Clients' and features a search bar and a table of active clients. A 'Non-Active' tab is also visible.

Name:	Email	Start date:	End date:	Coach:
Tessa Wan Beek	tessaft@mail.mail	12 June 2016	15 June 2016	Nabil Boudhan
Jan de Boer	jan-super1988@mail	12 June 2016	15 June 2016	Simon Power
Esmee van Mveen	emvmveen@mail	12 June 2016	15 June 2016	Simon Power
Jonas Haag	J-haag33@mail	12 June 2016	15 June 2016	Coach 2015
Frank Reiziger	reizimini@mail	12 June 2016	15 June 2016	Superman
Claas Jan Silessen	cjs-mail@mail	12 June 2016	15 June 2016	Batman
Tereza Stam	t-stam1995@mail	12 June 2016	15 June 2016	Nabil Boudhan

The screenshot shows a calendar for June 2016. The calendar is a grid with days of the week as columns and dates as rows. Some dates have tasks assigned to them. A sidebar on the right lists tasks for May 1st.

Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday
25	27	28	29	30	31	1
2	3	4	5	6	7	8
9 09:00 Fitness training	10 13:00 Meal planning Global tasks	11	12 08:00 Ruggengraat 12:00 Skype meeting	13	14	15
16	17	18	19	20	21	22
23	24	25	26	27	28	29
30	1	2	3	4	5	6

+ Add new task

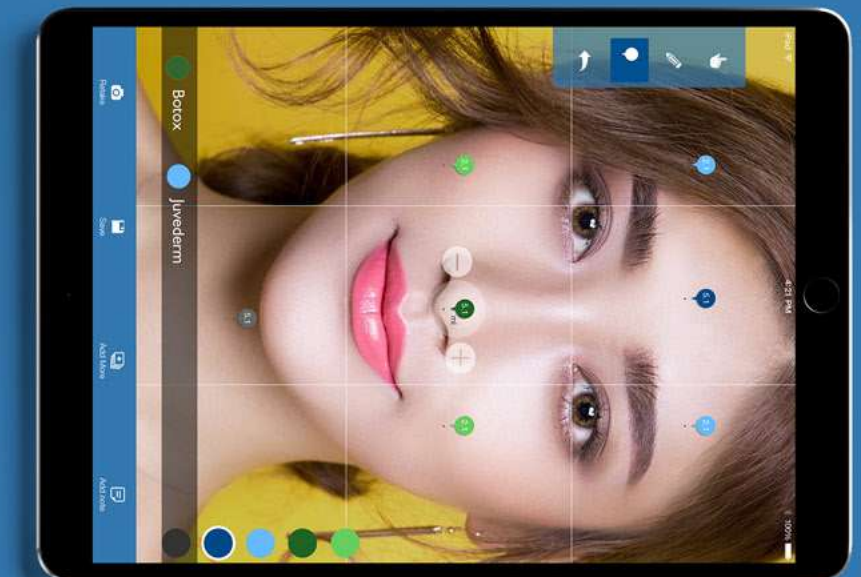

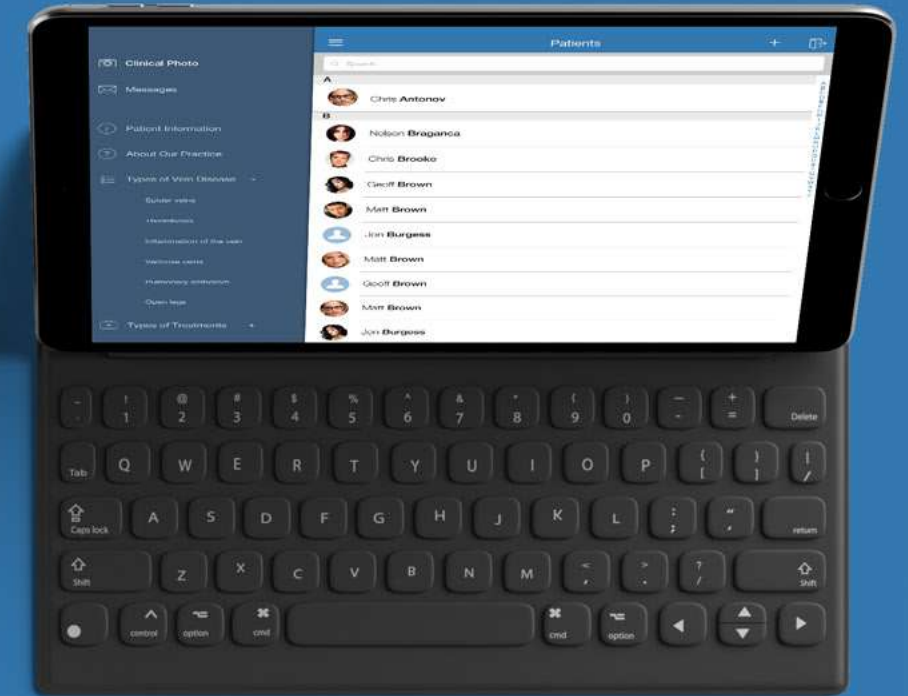

- Skype meeting May 1 12:00
- Ruggengraat meeting May 1 12:00
- Fitness training May 1 12:00
- Meal planning May 1 12:00

# RxPhoto

Healthcare & Data management

HIPAA compliant web application and mobile app built in collaboration with AppWorks. The mobile app turns an iOS device into clinical photography tool. The web app helps with managing photos and data recording.

# Print my glasses

3D printing tool for opticians

Status: Released

Android: Java

Tech Print Industries had two very distinct, but connected products for opticians. Both of them were designed for desktop PCs, and the company wanted to enter the mobile market.

Utilizing Bellus3D Face Camera Pro and its SDK, we created an Android app. It combines face scanning, 3D modeling, eyewear customization, and ordering. Now, the optician can provide his clients with the custom-made glasses using just his phone.

“

They were very responsive. They were always eager to answer if I had a question. The project manager even answered me while he was on vacation. At the start of the project, I was a little nervous, but they updated me daily via Skype.

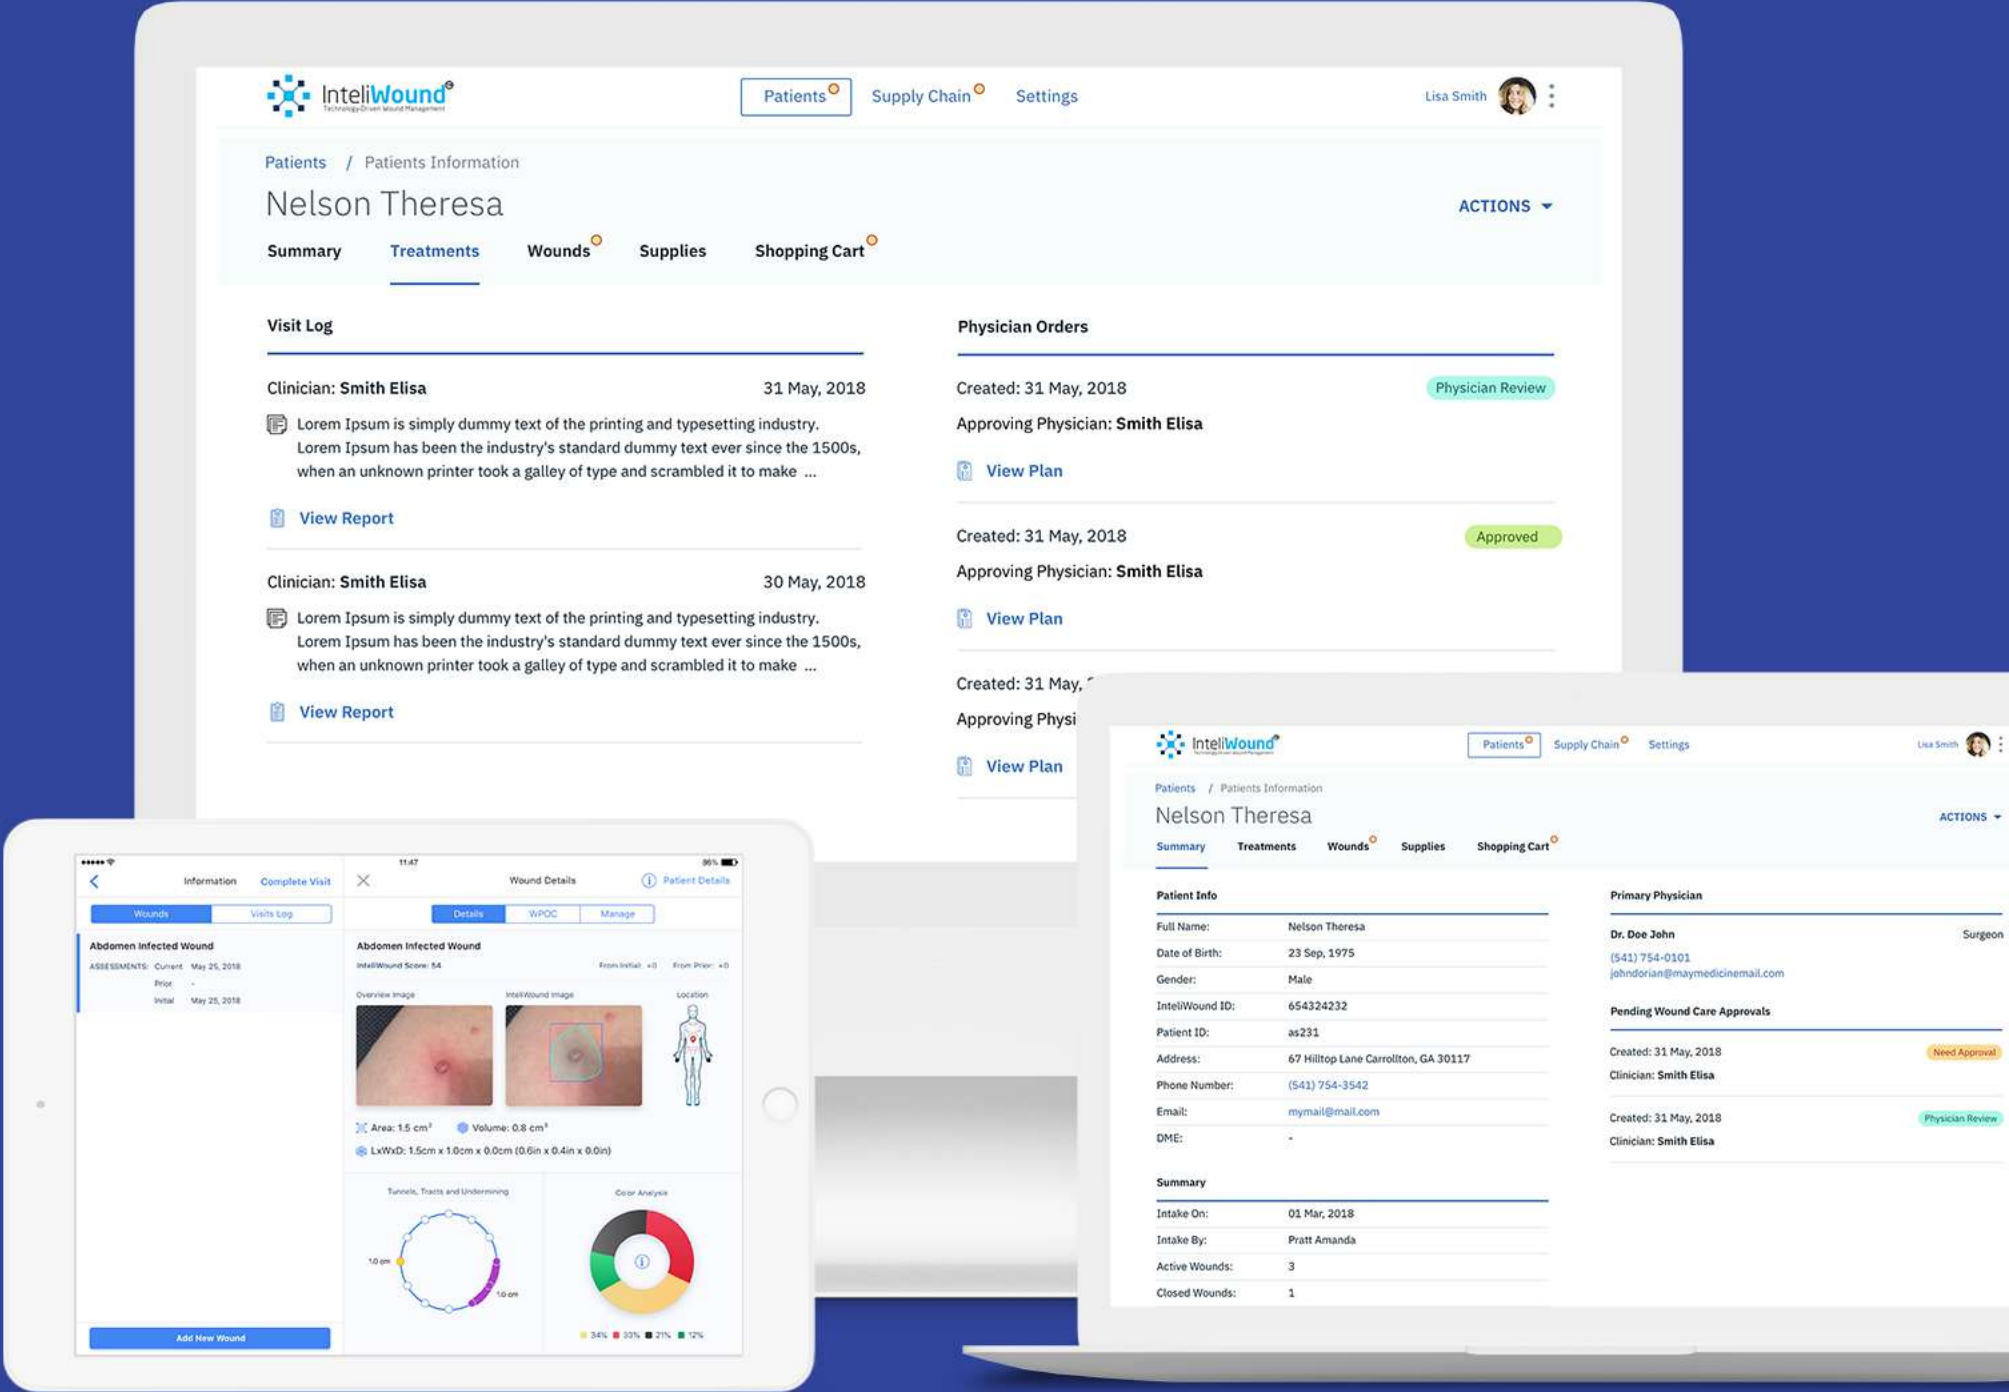

Mark Notenboom,  
CTO at Tech Print Industries

# Inteliwound

Comprehensive treatment tracking  
and supply chain management.

# The Beauties

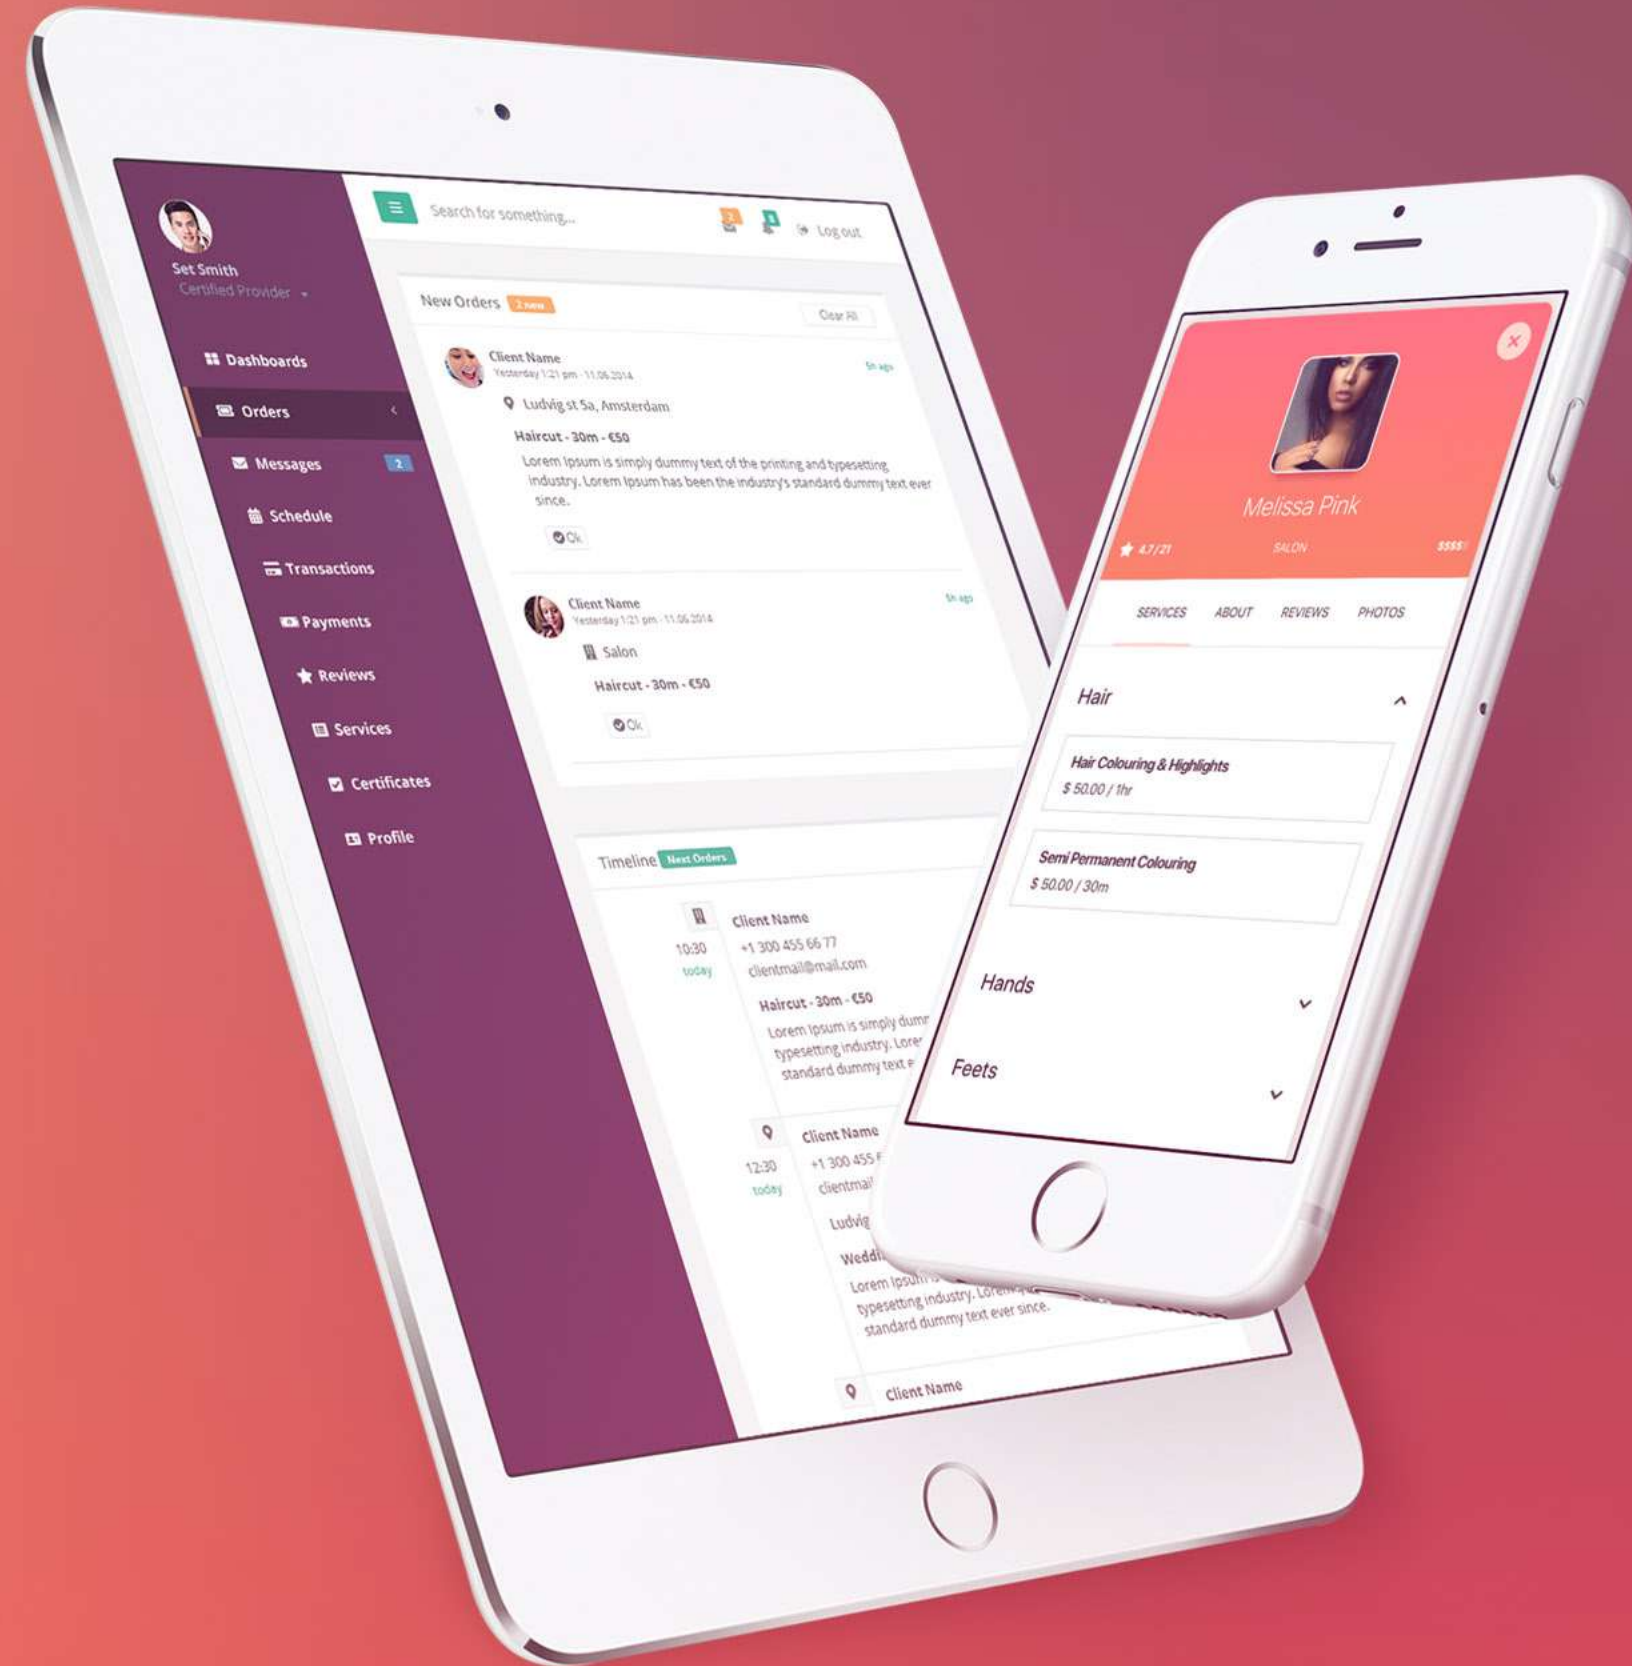

Self-regulated platform for beauty services and their clients

Status: Deployment

iOS: Swift

Android: Java

Web: Laravel

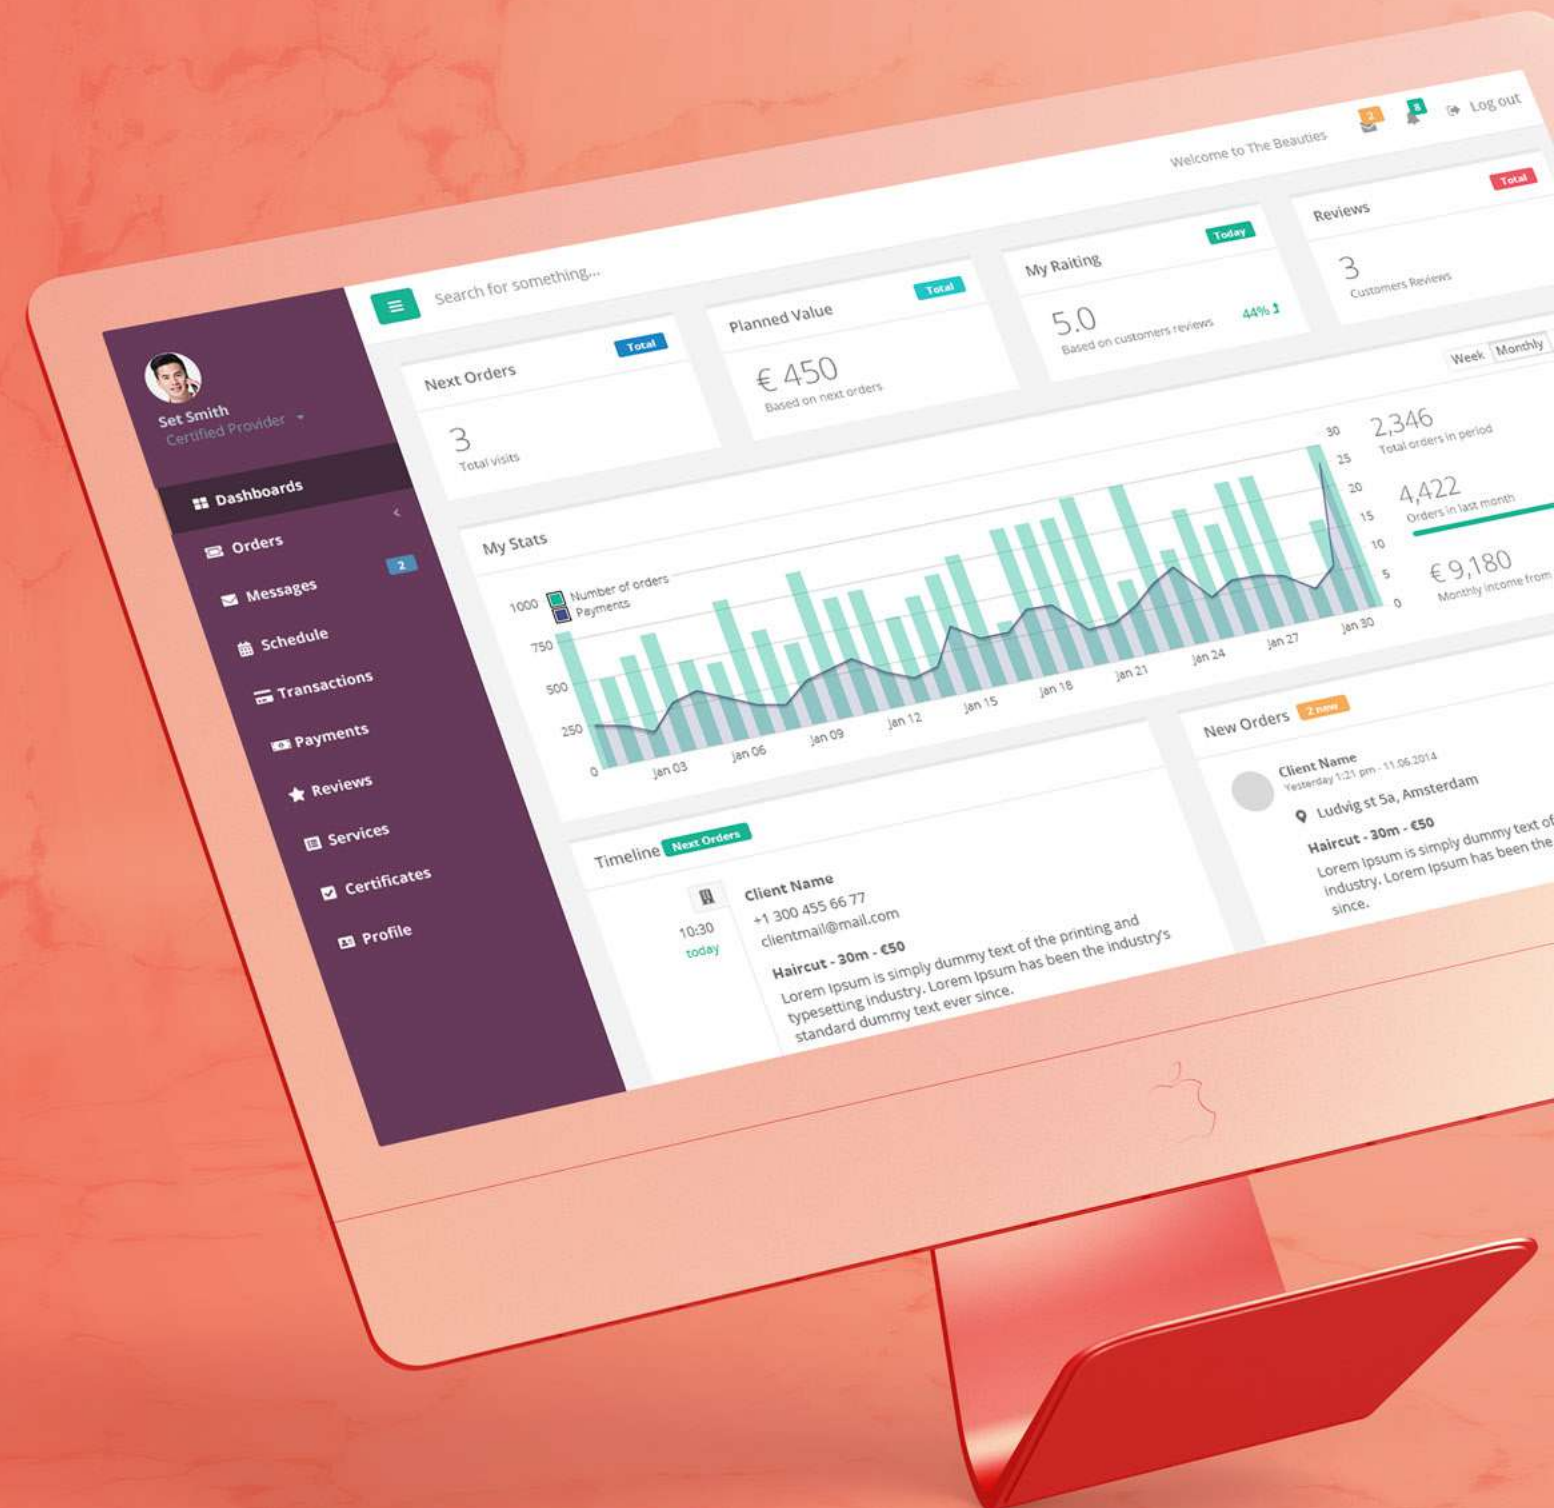

“

They always gave me their honest opinion. Everyone has his own vision, but it's not always best for the user. They understand that and always explain why you should do this or that.

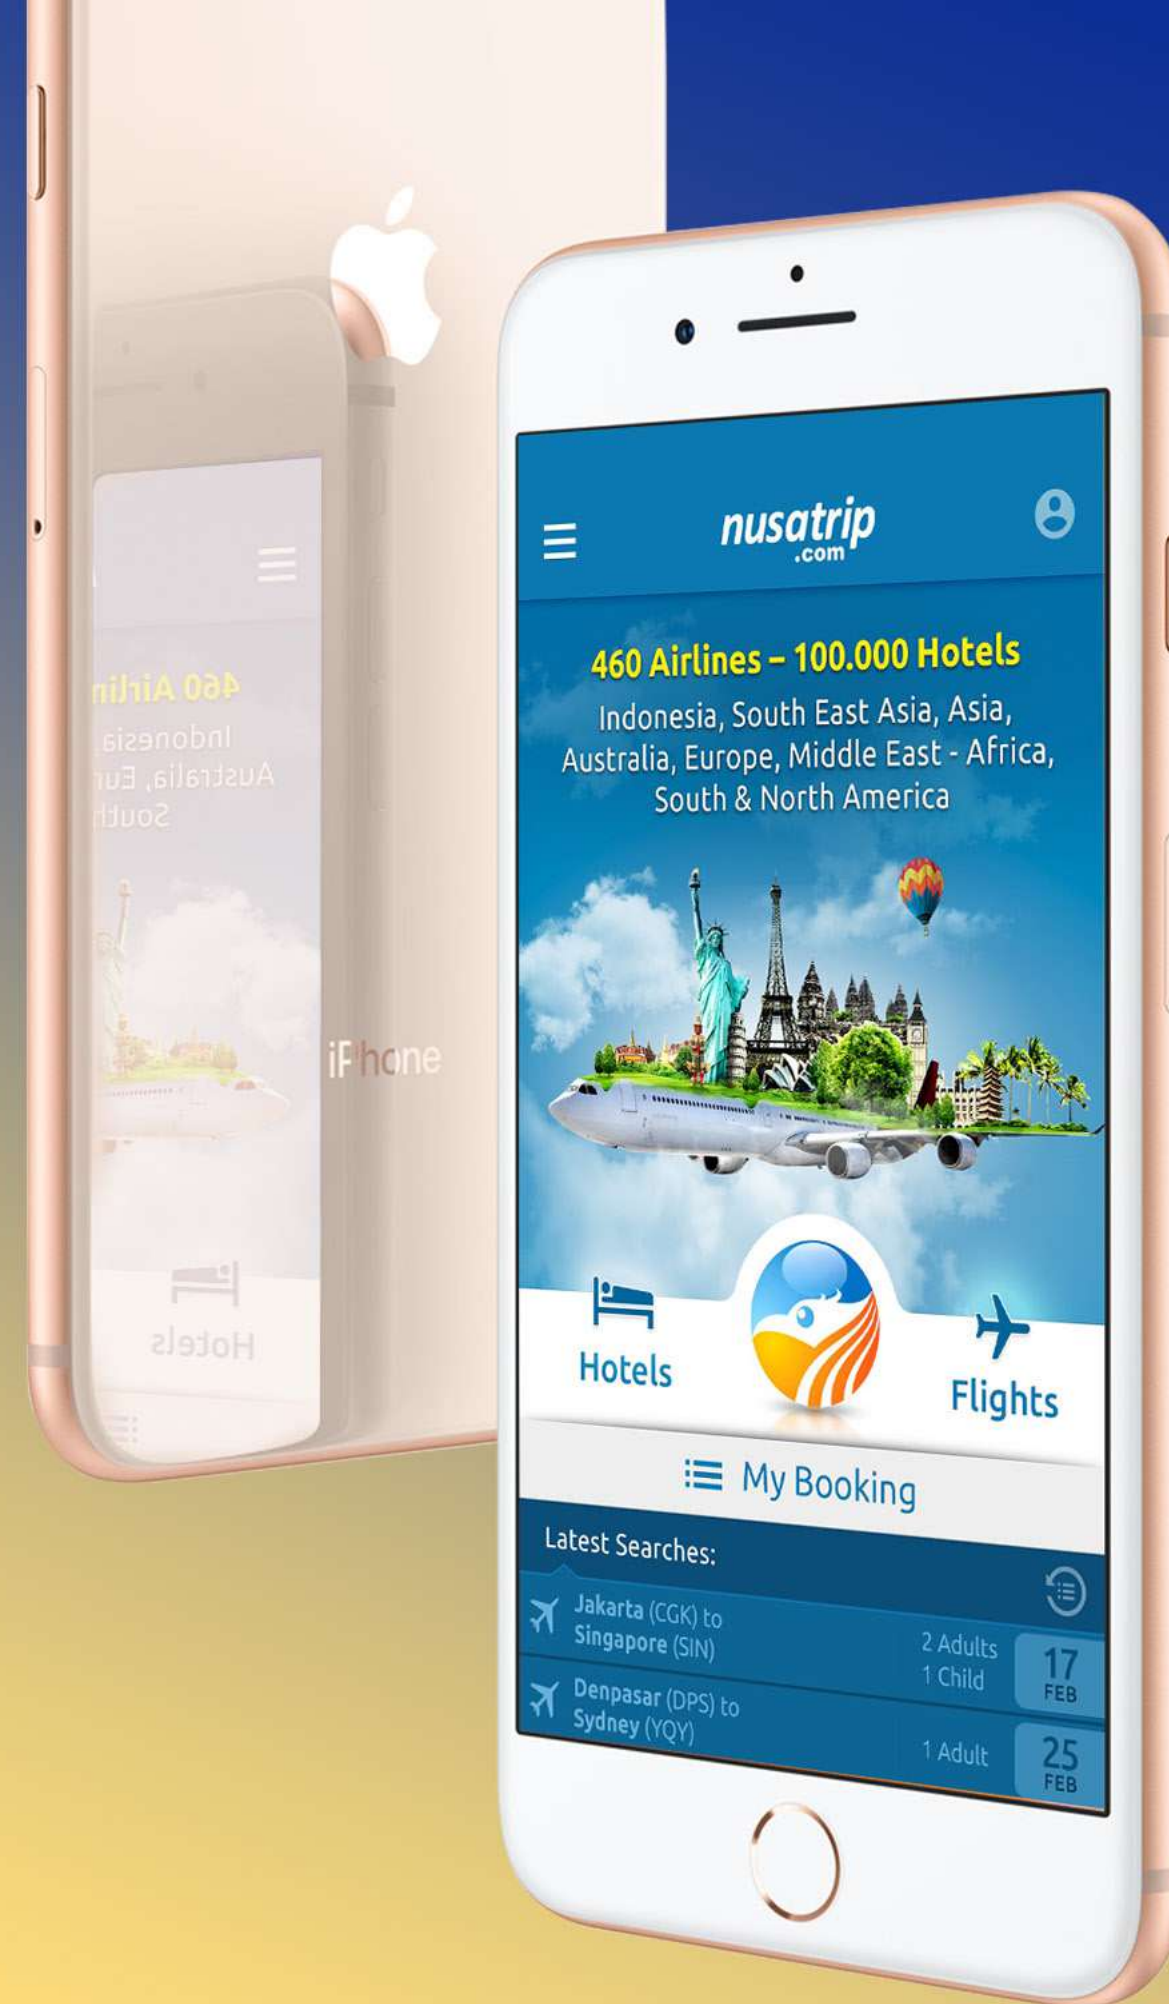

Vera van de Koevering,  
the founder of The Beauties

# Nusatrip

Booking & Traveling

A mobile app for an online travel agency that offers flight and hotel deals.

# InkLink

An e-commerce platform for tattoo artists and their clients.

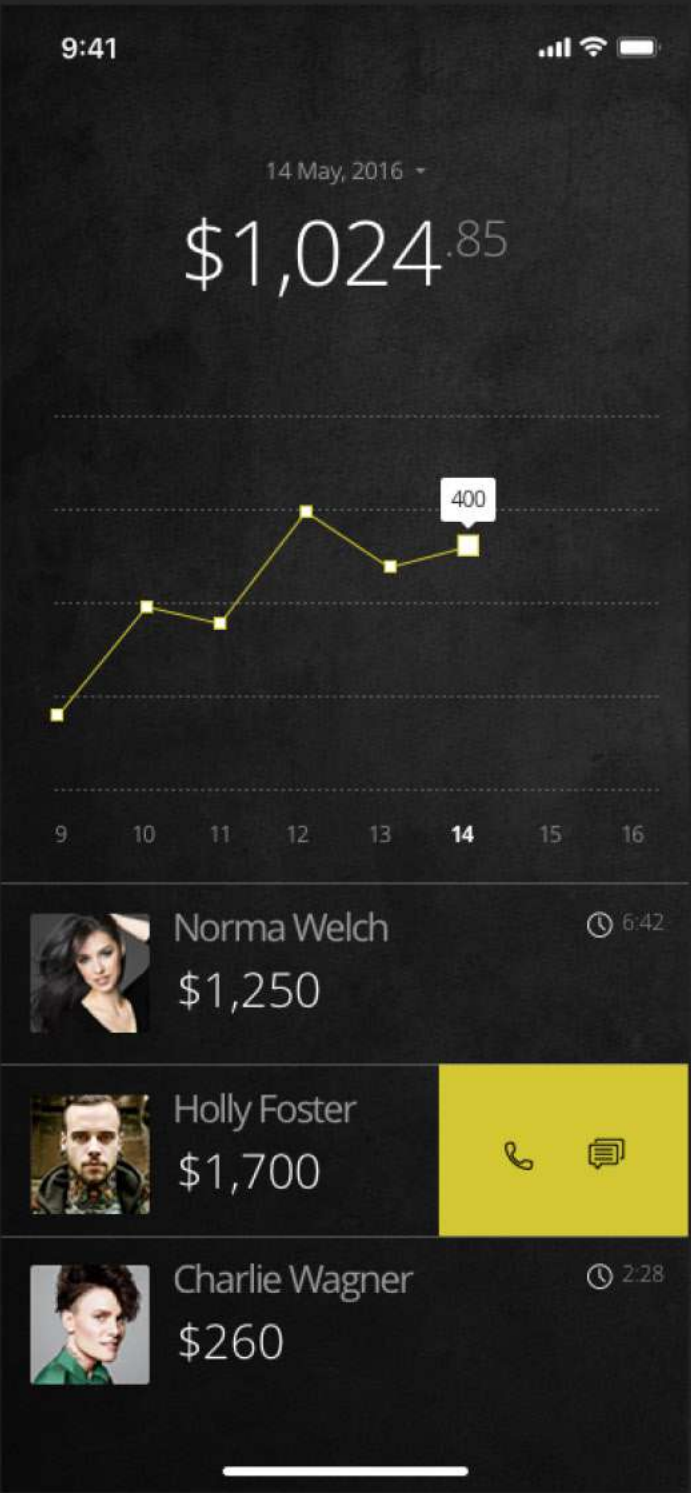

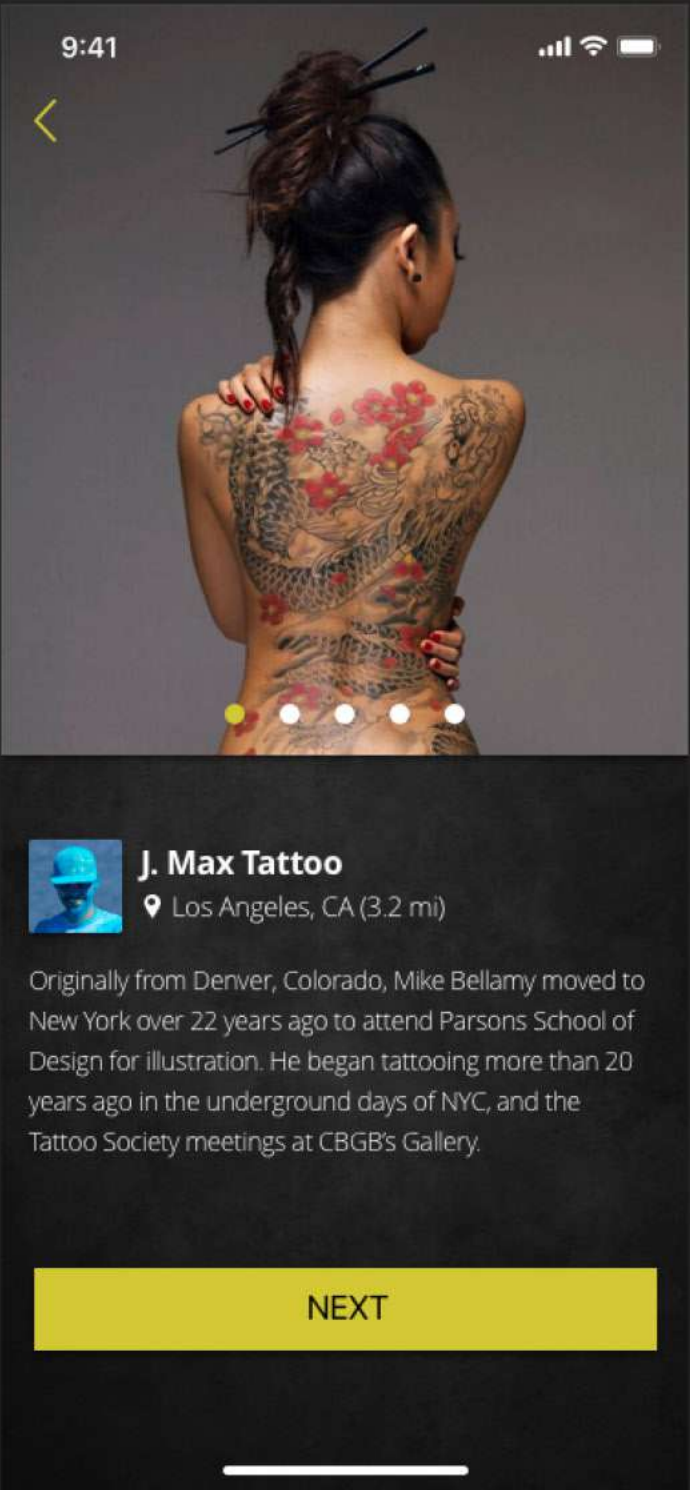

Riseapps really helped me expand the idea. I wanted to create a comfortable place for tattoo artists and their clients. But InkLnk turned out to be not just comfortable. It turned out to be really unique.

Grapes W.  
the InkLnk Founder

# Life of Legends

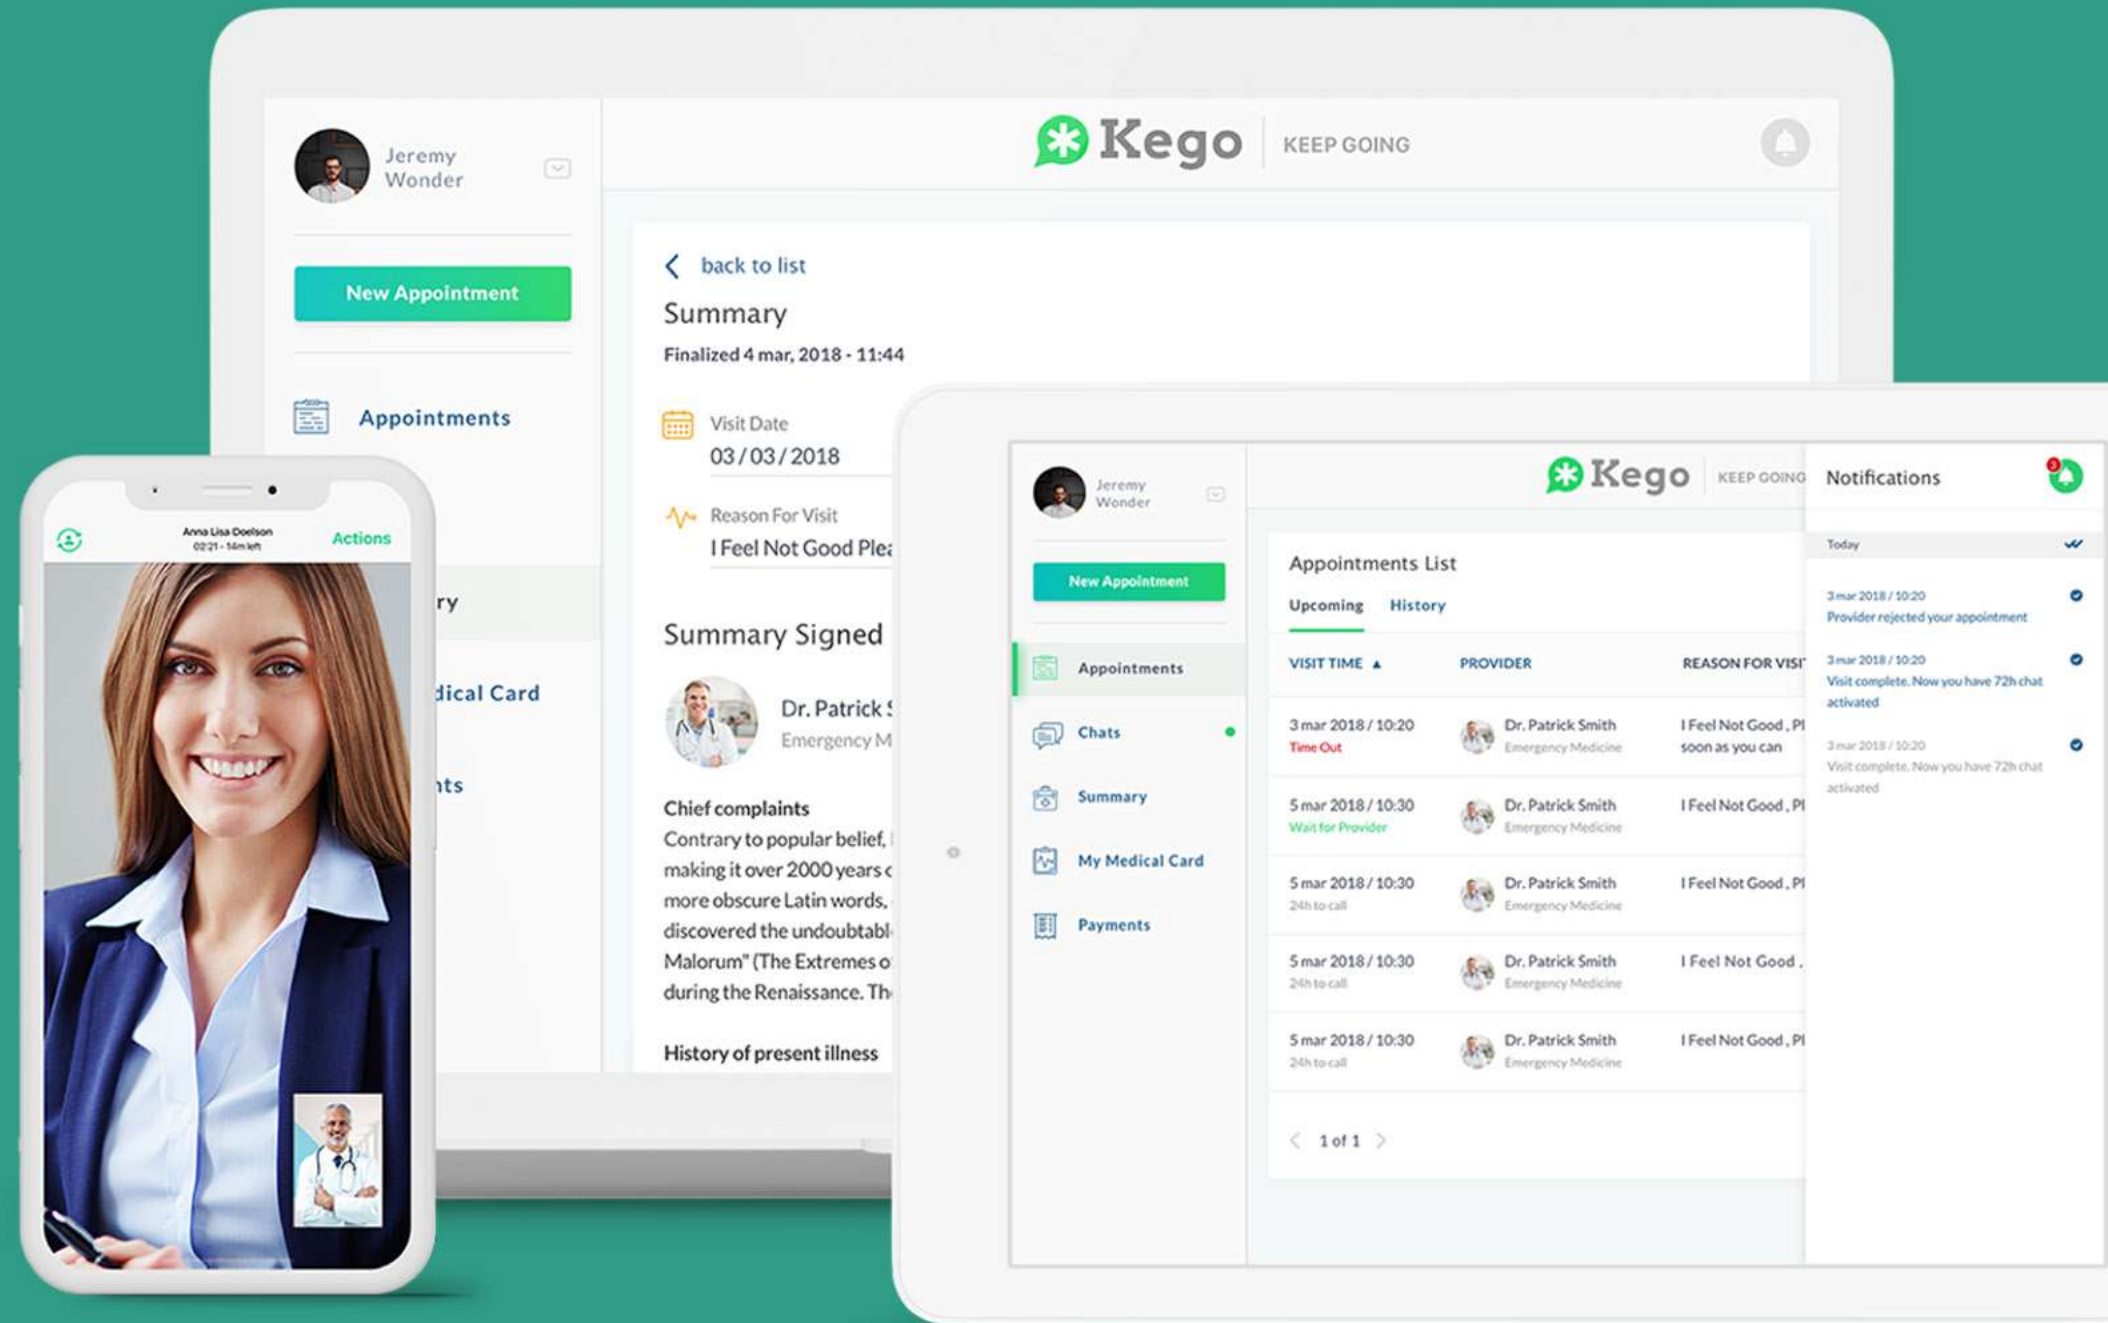

Social Networking & Entertainment

Exclusive news, photos, products, and contests from Dutch celebrities.

# Kego

A multiplatform application  
for remote medical care

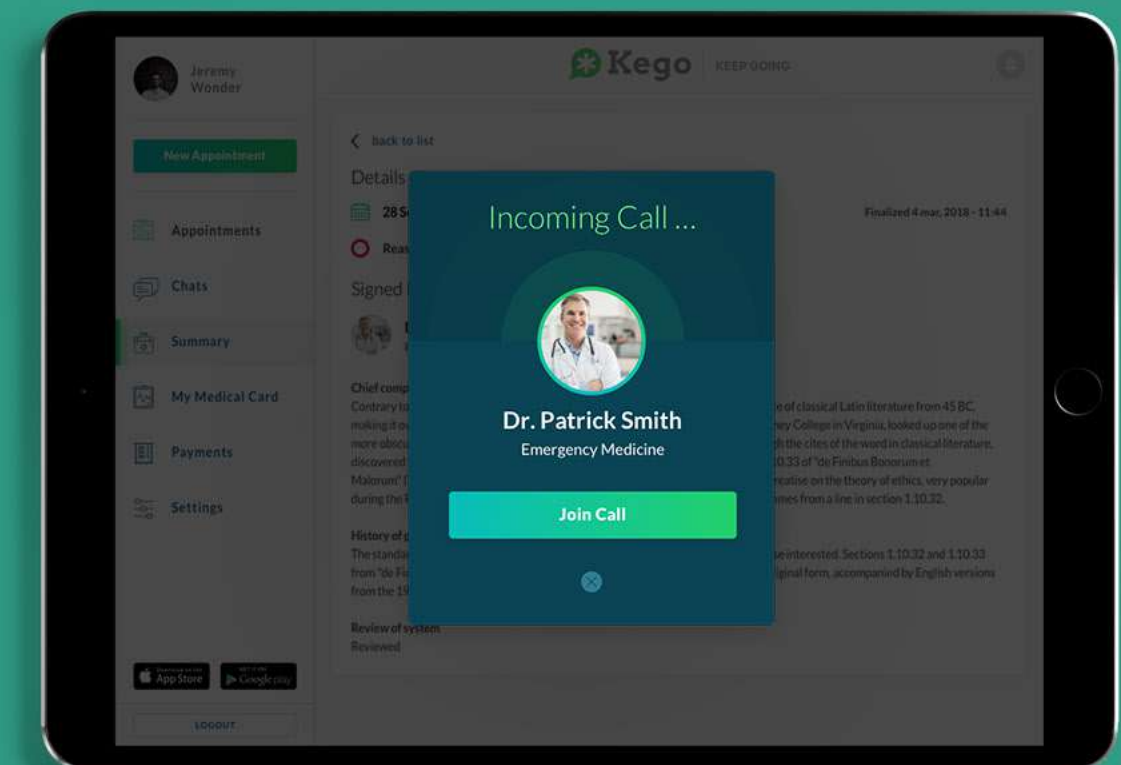

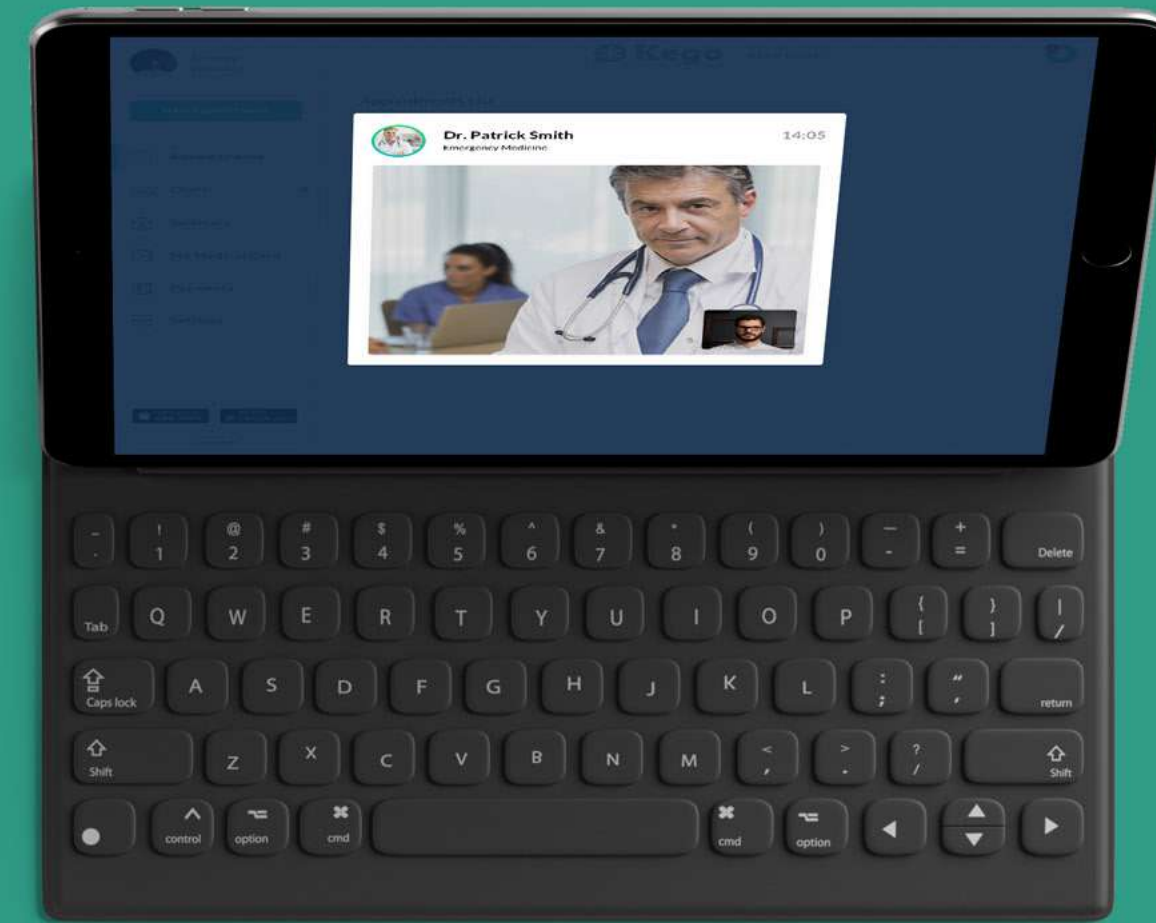

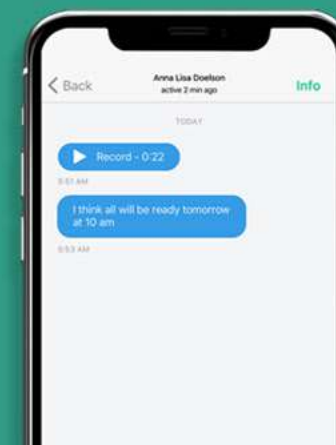

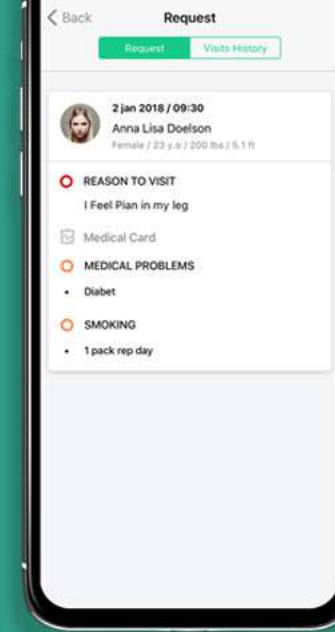

iOS and Android have equal market shares in New Mexico. Our client planned to start his service there, so we built two patient apps, for both mobile platforms.

But it wasn't enough. We knew that some people feel more comfortable using desktop applications. Also, people usually have so many apps on their phone that they don't want to install any new ones.

The solution was obvious. We made a web application with a React frontend and Django backend. The application lets you make appointments with the doctors and contact them via text, voice, or video chat on any device without installation.

It also records your medical and payment history, saving you from needless paperwork. The backend makes sure that all your data is secure and synced to the cloud correctly.

To help patients start with Kego, we made a landing page that explains the main features and advantages of the service.

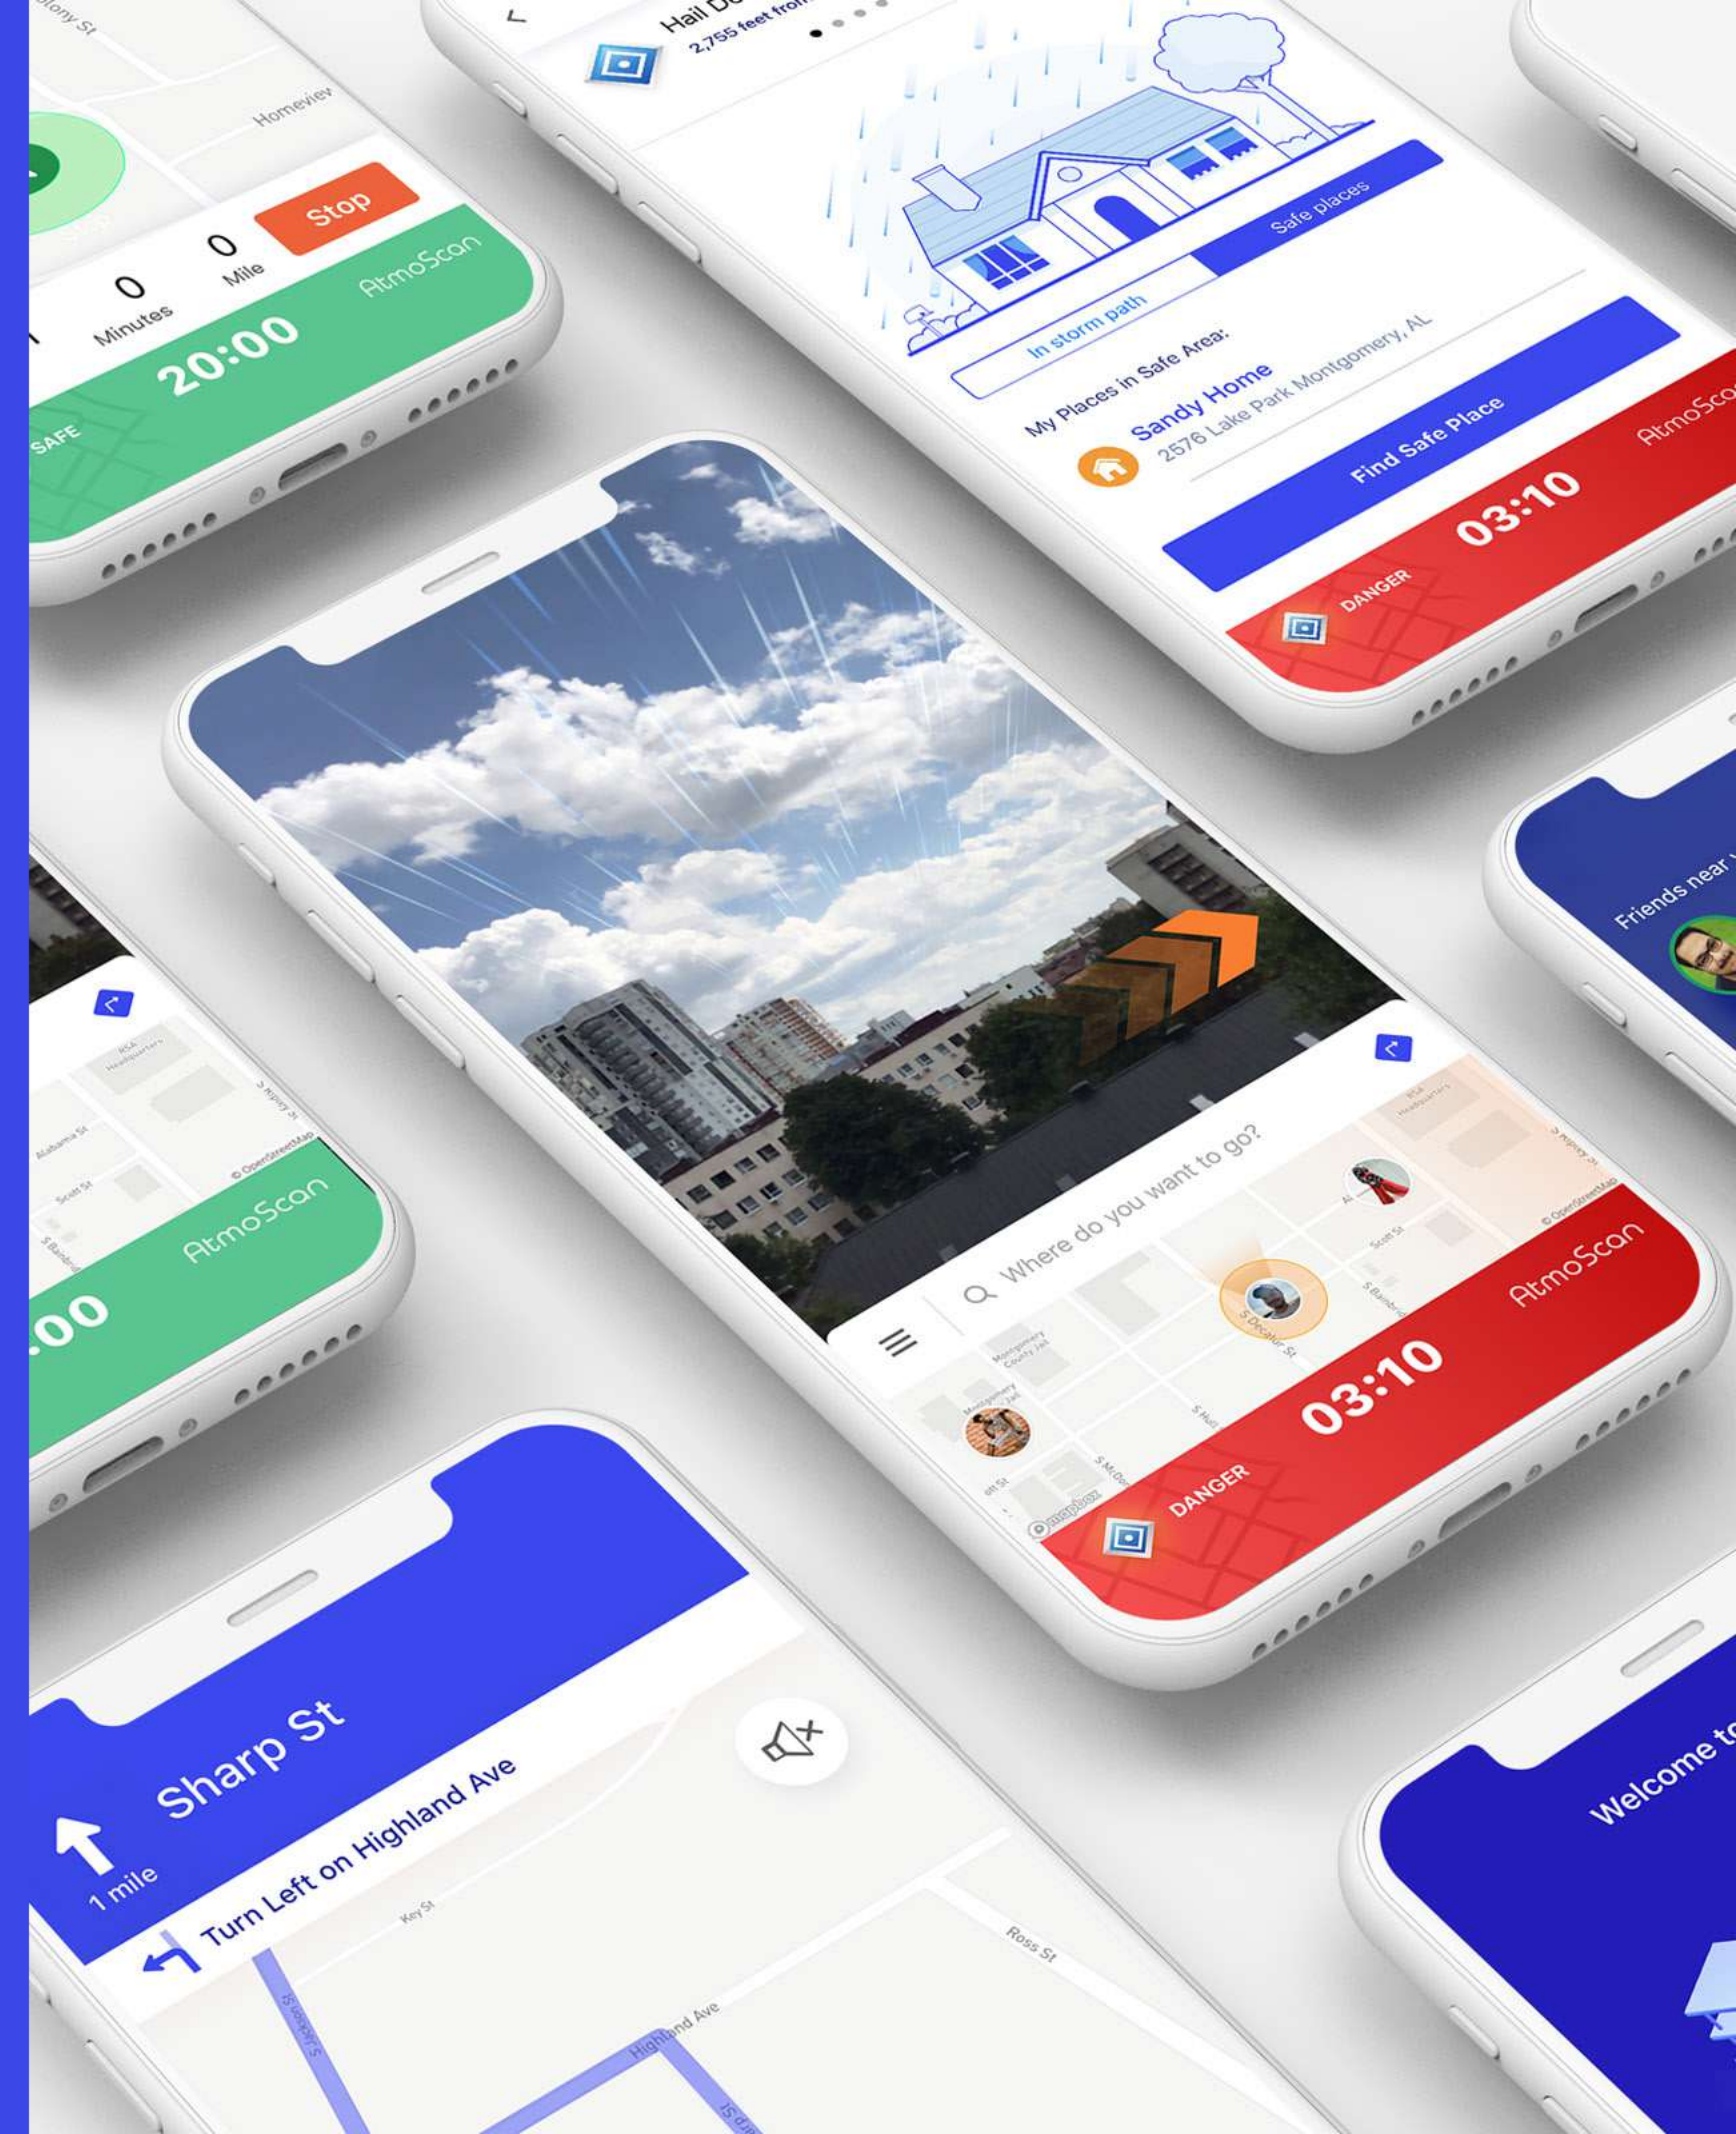

# Atmoscan

## Navigation & Augmented Reality

An iOS app for people that live in areas frequently hit by storms, floods, earthquakes, wildfires etc. The app connects to the AerisWeather service and sets up safe routes for the user during natural disasters. Augmented reality makes navigation more visual and less stressful.
